

SUMMARY

Data Analyst with 6 months of internship experience building ETL pipelines, API-driven analytics systems, and interactive dashboards. Proficient in Python, SQL, and Power BI, with three live-deployed analytics projects backed by cloud databases. Focused on turning raw data into decisions.

WORK EXPERIENCE

ShapeMySkills Private Limited — *Data Analytics Intern*

July 2024 — Dec 2024

- Built Python ETL pipelines integrating REST APIs and MySQL — delivering end-to-end analytics workflows from raw ingestion to Power BI visualisation, cutting data turnaround from days to hours and reducing manual preparation time by ~40%.
- Tasked with improving visibility into business KPIs across non-technical teams; designed and delivered 5+ Power BI dashboards covering sales trends, job market analytics, and operational metrics, resulting in self-serve reporting adopted by team members with no SQL or Python background.

PROJECTS

Live AQI Monitoring & Pollutant Analytics System

[live-aqi-analytics.streamlit.app](#) [GitHub](#)

- Automated an hourly ETL pipeline using Python, WAQI REST API, and Windows Task Scheduler to collect and store 6,200+ AQI observations across 25 Indian cities into a cloud MySQL database on Railway, ensuring data freshness without manual intervention.
- Built and deployed a public multi-page Streamlit dashboard (alongside a Power BI report) revealing an average AQI of 116, identifying Pune as the most polluted city.

Job Market Pulse — India Hiring Analytics

[job-market-pulse-india.streamlit.app](#) [GitHub](#)

- Designed a data ingestion pipeline using the Adzuna API and Python to collect, clean, and load 1,149 job listings across 51 cities and 666 companies into a cloud MySQL database, enabling structured querying of live market data.
- Analysed the dataset to uncover that Bangalore accounted for 29% of all listings and the top three cities contributed 66% of total hiring demand. Delivered findings via a live Streamlit and Power BI dashboard, surfacing geographic concentration patterns for job seekers.

Sales Performance Analytics Dashboard

[sales-analytic-dashboard.streamlit.app](#) [GitHub](#)

- Built a Python and SQLAlchemy pipeline to ingest, clean, and load 9,994 retail sales records into a cloud MySQL database, producing an analysis ready dataset for reporting.
- Developed a 4-page Power BI report and live Streamlit dashboard identifying Technology as the top revenue category (\$806K), California as the strongest state market (\$441K).

EDUCATION

IGNOU — Master of Computer Applications (MCA)

2024 — Present

University of Lucknow — Bachelor of Computer Applications (BCA), **78%**

2020 — 2023

SKILLS

Programming	Python, SQL
Analytics	Pandas, NumPy, Excel
Visualisation	Power BI, Streamlit, Plotly, DAX, Matplotlib, Seaborn
Deployment	Railway, Streamlit Cloud, Git
Database	MySQL, SQLAlchemy
Concepts	ETL Pipelines, REST APIs, Cloud Databases

CERTIFICATIONS

- Data Visualisation** — TATA
- Data Analytics Job Simulation** — Deloitte
- Python, SQL and Power BI for Data Analysis** — ShapeMySkills
- SQL (Intermediate)** — HackerRank
- Python (Basic)** — HackerRank
